The bond is very sensitive to your assumptions (not all bonds are like this). At 3m, 6m, and 12m historical speeds, the bond has positive yield. So the question is, do you think things are getting better, or worse? Remember, this is an Option ARM pool with recasts ramping in the summer. When will the default wave occur on the troubled borrowers? If you think it doesn't happen until after the summer, you'll be a-ok in this bond.

Also, remember in article, prices on this stuff are all over the place. If it was bought at a 1.8 price, it's a loss in any scenario, and if it's bought at a sub-dollar price, it's a win.

Other scenarios below.
